REVIEW 1

Design Plan:	Document Name: Problem Definition Document	SWD/Form No. 1
Effective Date: 22/02/2019	Version: 1.0	Page no. 1

1 Problem Definition

In recent years, people's mobility and demand for tourism has increased. More and more vehicles contribute to the development of transport network problems. Types of vehicles such as buses, coaches, taxis, trains ... only meet short travel distances and don't bring high safety to customers. Airlines in Vietnam is growing with many famous brands such as Vietnamairlines, VietJet, JetStar ... bringing high competitive.

With the purpose of serving the quality of life, serving the needs of customers, our FTA airline company was born to meet the increasing demand and travel of domestic customers. In the context of increasingly busy and bustling life, the issue of air ticket booking is quite a problem. Suppose we had a quick flight tomorrow but today the job is too busy and we can't go to the ticket counter directly to buy it, or buy online tickets online but we don't know where to buy, the form and the procedure is too complicated, the price is too high or sometimes there is no suitable flight for us. To solve this problem, our airline has developed the "Flight Tickets Anywhere (FTA)" website, which helps customers to book flight tickets anytime, anywhere and most quickly.

With a friendly, simple, easy-to-use interface, experienced and enthusiastic online support team, high speed website to meet the needs of access, especially on peak occasions, FTA will help customers book tickets The ball machine is fast with the simplest procedure, especially the price is cheap compared to other firms.

2 Customer Requirement Specification

2.1 User use System

❖ Customer:

- Who use the webpage to search flight, Book flight, payment, and Tracing their booking (View detail of history booking). Customers can sign up to become a member of a webpage.

❖ Admin:

- Who manage the web: Can Create, update: Passenger, Account, Airline, Airport, Region and other information of the web and make report.

	Prepared by (Student)	Approved by (Teacher)
Date: 22/02/2019	All Member	Nguyen Hoang Thao

Design Plan:	Document Name: Problem Definition Document	SWD/Form No. 1
Effective Date: 22/02/2019	Version: 1.0	Page no. 2

2.2. Functional Requirements.

2.2.1 Customer

❖ Search Flight:

- Customer choice departure, destination, depart day, return day, number of customer, airline on web for searching the flight that they want.
- Departure, destination, depart day, number of customer is required, customer choice in view. Customer can choose depart day from present to one year in future. Number customer default is one if customer do not input. Maximum every booking is nine include Child, Infant, Adult.
- View must have notifications to customer if they input invalid information.
- The web will return all flight corresponding with search condition of passenger.

❖ Book Flight:

- Passenger can choose Flight from list of after they search. The web will display information of the flight chosen. Include: Class, terms of class, Depart time, Arrive time, Aircraft, Departure, Destination.
- After choice Flight passenger will see Price summary include fare, Tax, Fee carrier charges.
- Continue to fill information detail: Title, given name, Last name, date of birth, gender, Contact info: phone number, Email address.
- Accept Term then select payment online with Card number, Name on card, Expiration date.
- Customer can edit departure, destination, depart day, return day, number of customer, airline in booking process before make payment. The web will give new flights according to new information that customer input.
- After payment successful, system will send email ticket in PDF format to customer, Customer can print this ticket to check-in in airport.
- In Booking process must have notifications when input value is not valid.

❖ Trace Booking

- Customer can view their trip information by enter following exactly information: Reservation, Last Name, Email Address or login by account to see all history

	Prepared by (Student)	Approved by (Teacher)
Date: 22/02/2019	All Member	Nguyen Hoang Thao

Design Plan:	Document Name: Problem Definition Document	SWD/Form No. 1
Effective Date: 22/02/2019	Version: 1.0	Page no. 3

booking. If customers are not the member, they can only view history of booking by Reservation, Last Name, Email Address for every finding.

- Web will display about list of flight that customer booked: , Depart time, Arrive time, Aircraft, Departure, Destination.

❖ Sign up

- Customer can sign up to system to become a member of system.
- Customer fill account id, account name, email, phone, location, date of birth, gender into form that system provide to sign up.
- Account id, account name, email, phone is required.
- View have notifications if imformation customer input is not valid or sign up success.

❖ Login

- If Customer signed up they can logon to system by filling account Id, password registried.
- Customer can view, update their profile information (Account name, date of birth, gender, email, phone).
- Customer can view history booking: Depart time, Arrive time, Aircraft, Departure, Destination,....
- View have to display message if logon fail or display name of customer in webpage.

❖ View News, Contact info of the web.

- In home page display recommend about cheap fligh from airline, Customer can choise drect from this to book flight.
- When customer need help they can view contact information of the web: Email, phone to contact.

2.2.2 Admin

❖ Dashboard

- Admin can view Sale overview: Total sale in days, in month, Total profit.
- View list of lastest Booking include imformation: Airline, Departure, destination,...
- View list of new member, total member.

❖ Make Report

	Prepared by (Student)	Approved by (Teacher)
Date: 22/02/2019	All Member	Nguyen Hoang Thao

Design Plan:	Document Name: Problem Definition Document	SWD/Form No. 1
Effective Date: 22/02/2019	Version: 1.0	Page no. 4

- The admin can make report by input filter: Airline, Airport, Region in range of time. Print report with PDF Format.

❖ User management

- Create, update, view, delete information of user in system by input Account ID, Account Name.
- Grant, revoke role to user.

❖ Manage information about Web:

About info displayed in view that customer can choose direct when search flight. Or admin use to filter when make report, view dashboard. All value input has to valid and has notifications

- **Airline:** This is information about provider flight. Admin can create Airline by input AirlineID, Airline Name. Update Region by input AirlineName.
- **Airport:** This is information about where passenger can depart or arrive. Admin can create Airport by input Airport ID, Airport Name, Region ID the Airport belong.
- **Region:** This is information about that Airport located. Admin can Create region by input RegionID, Region Name. Update Region by input Region name.
- **Contact info:** admin can create or edit contact info of the web: Phone, email, time work.

2.3 System Requirements

2.3.1 Hardware Requirements

Server:

Component	Requirement
CPU	Processor type: Core-compatible processor or faster Processor speed: Recommended: 2.0 GHz or faster
OS	Microsoft Windows 7 with IIS 7 or higher

7. Entity Relationship (E-R) Diagram

7.1 E-R Diagram

	Prepared by all Member	Approved by (Teacher)
Date: 01/03/2019	All Member	Nguyen Hoang Thao

Design Plan:	Document Name: ERD/Table Design/Sitemap/UI	SWD/Form No. 1
Effective Date: 01/03/2019	Version: 1.0	Page no. 26

7.2 Table

7.2.1 Region

Field Name	Data Type	Constraint	Description
RegionID	varchar(15)	Primary Key	The identification of Region
RegionName	Nvarchar(50)	Not null	

7.2.2 Airport

Field Name	Data Type	Constraint	Description
AirportID	varchar(15)	PK	The identification of Airport
AirportName	Nvarchar(50)	Not null	
RegionID	varchar(15)	Not null, FK	

	Prepared by all Member	Approved by (Teacher)
Date: 01/03/2019	All Member	Nguyen Hoang Thao

Design Plan:	Document Name: ERD/Table Design/Sitemap/UI	SWD/Form No. 1
Effective Date: 01/03/2019	Version: 1.0	Page no. 27

7.2.3 Airline

Field Name	Data Type	Constraint	Description
AirlineID	varchar(15)	PK	The identification of Airline
AirlineName	Nvarchar(50)	Not null	

7.2.4 Flight

Field Name	Data Type	Constraint	Description
FlightID	varchar(15)	PK	The identification of Flight
Depart	varchar(15)	Not null,FK	
Arrive	varchar(15)	Not null, FK	
TimeDepart	Datetime	Not null	
TimeArrive	Datetime	Not null	
AirCraff	Varchar(50)	Not null	
Airline	int	Not null, FK	
Price	float	Not null	

7.2.5 Class

Field Name	Data Type	Constraint	Description
ClassID	int	Primary Key	The identification of Region
ClassName	Varchar(50)	Not null	

7.2.6 ClassDetail

Field Name	Data Type	Constraint	Description
ClassDetailID	int	Primary Key	The identification
ClassId	Varchar(50)	Not null, FK	
TicketCancellationRefund	bit	Not null	
TicketChanges	bit	Not null	
Upgrade	bit	Not null	
PreReservedSeat	bit	Not null	
PriorityCheckIn	bit	Not null	

7.2.7 ClassFlight

Field Name	Data Type	Constraint	Description
FlightID	int	PK,FK	The identification
ClassID	Varchar(50)	PK,FK	
Price	float	Not null	

	Prepared by all Member	Approved by (Teacher)

Design Plan:	Document Name: ERD/Table Design/Sitemap/UI	SWD/Form No. 1
Effective Date: 01/03/2019	Version: 1.0	Page no. 28

7.2.8 Ticket

Field Name	Data Type	Constraint	Description
TicketId	int	PK,FK	The identification
OrderDate	datetime	Not null	
BookingCode	float	Not null	
Child	tinyint	Not null	
Infant	tinyint	Not null	
Adult	tinyint	Not null	
PassengerTotal	tinyint	Not null	
FlightID	int	Not null,FK	

7.2.9 Passenger

Field Name	Data Type	Constraint	Description
PassengerId	int	PK,FK	The identification
Title	Char(3)	Not null	
FirstAndMiddleName	varchar	Not null	
LastName	varchar	Not null	
BirthDay	varchar	Not null	
PhoneOne	varchar	Not null	
PhoneTwo	varchar		
EmailOne	varchar	Not null	
EmailTwo	varchar		
PassengerGroup	varchar	Not null	
TicketID	Int	Not null,FK	
AccountID	Int	FK

7.2.10 Payment

Field Name	Data Type	Constraint	Description
PaymentId	int	PK	The identification
TickedId	int	Not null	
DatePaid	datetime	Not null	
Account	int	Not null	
Total	real	Not null	
Detail	nvarchar(500)	Not null	
PaymentId	int	Not null,FK	
TickedId	int	Not null,FK	
DatePaid	datetime	Not null	
Account	varchar	Not null	
TicketID	Int	Not null,FK	
AccountID	Int	Not Null,FK	

7.2.11 TicketDetailPrice

Field Name	Data Type	Constraint	Description
id	int	PK	The identification
TicketId	int	Not null, FK	
Total	float	Not null	
Fare	float	Not null	
Insurance	float	Not null	
Tax	float	Not null	

	Prepared by all Member	Approved by (Teacher)

Effective Date: 01/03/2019	Version: 1.0	Page no. 30

7.2.12 Account

Field Name	Data Type	Constraint	Description
Id	int	PK	The identification
AccountID	varchar(50)	Unique	
AccountName	nvarchar(100)	Not null	
OpenDate	datetime	Not null	
Phone	varchar(50)	Not null	
Email	varchar(50)	Unique	
gender	bit		
Password	Varchar(200)	Not null	

7.2.13 Role

Field Name	Data Type	Constraint	Description
RoleID	varchar(15)	PK	The identification
Description	nvarchar(50)		

7.2.14 AccountRole

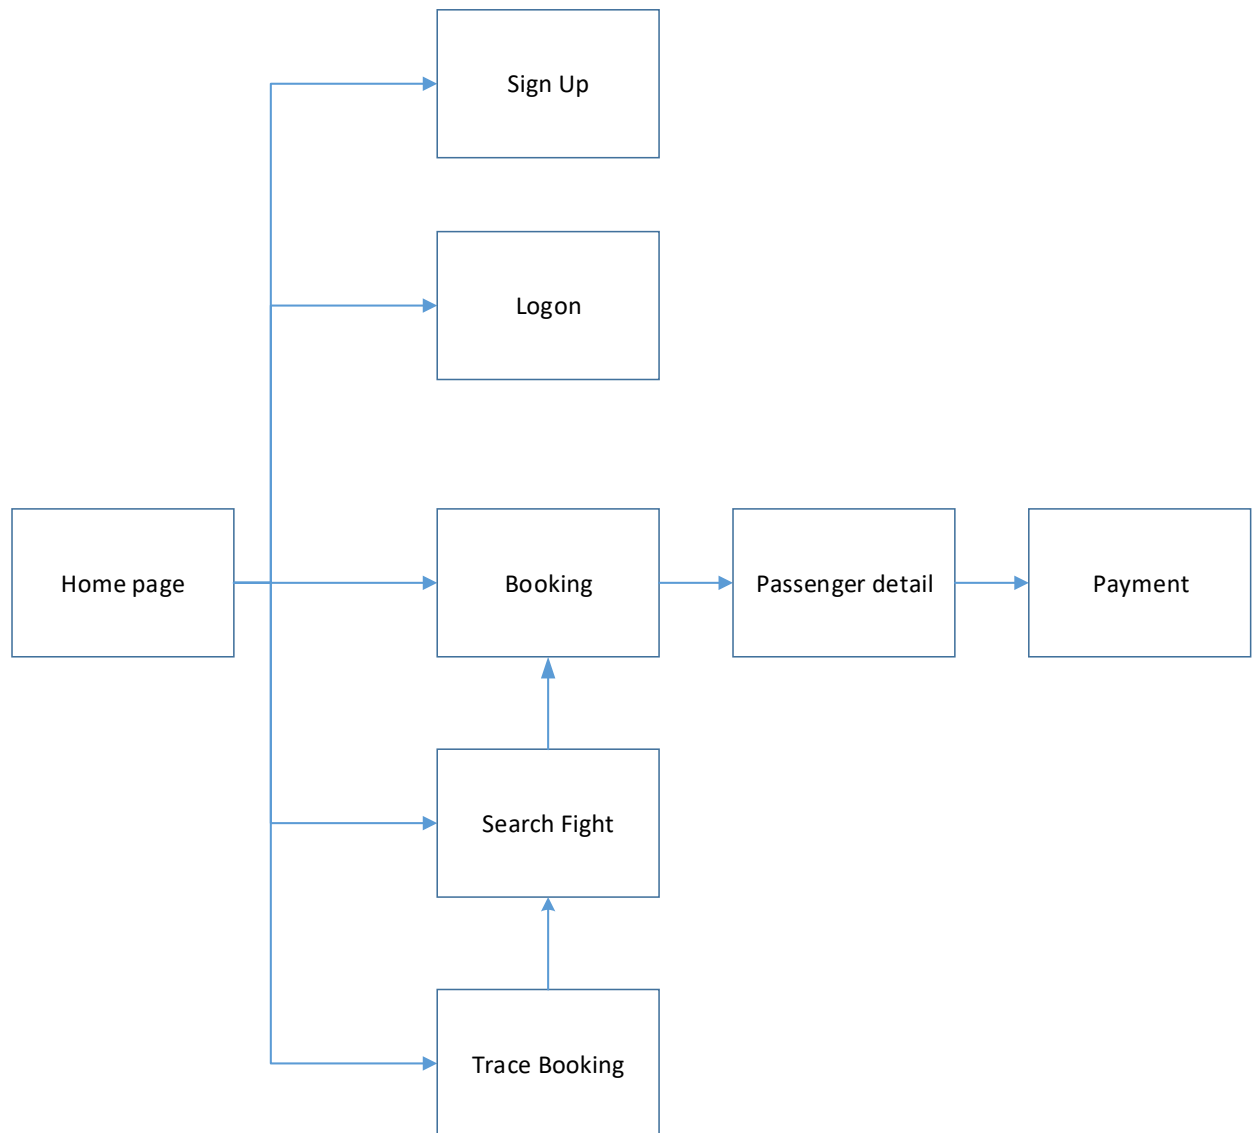

Field Name	Data Type	Constraint	Description
Account	int	PK,FK	The identification
Role	varchar(15)	PK,FK

9. UI

9.1 Home Page

The UI design for the Home Page is structured as follows:

- Header:** A light blue bar containing a 'Logo' placeholder on the left, a 'Page Name' placeholder in the center, and 'Login' and 'SignUp' buttons on the right.
- Navigation:** A row of three light blue buttons labeled 'Booking', 'Search Flight', and 'Trace Booking'.
- Search Section:** A blue background area with five white input fields labeled 'From', 'To', 'Derpart', 'Arrive', and 'Airline'. A white 'Find Flight' button is positioned to the right of these fields.
- News Section:** A large white rectangular area with a 'News' placeholder in the center.
- Footer:** A light blue bar at the bottom with a 'Footer' placeholder in the center.

Design Plan:	Document Name: ERD/Table Design/Sitemap/UI	SWD/Form No. 1
Effective Date: 01/03/2019	Version: 1.0	Page no. 34

9.2 Sign Up

The wireframe illustrates the layout of the Sign Up page. It features a top navigation bar with a logo on the left, a central navigation menu, and 'Login' and 'SignUp' links on the right. Below the navigation bar, there are three buttons: 'Booking', 'Search Flight', and 'Trace Booking'. The main body of the page is dominated by a sign-up form. This form includes input fields for 'AccountID', 'Account Name', 'Password', 'Re-password', 'Gender', 'Birthday', 'Phone', and 'Email'. A 'Sign Up' button is positioned below these fields. At the bottom of the page, there is a footer section.

Design Plan:	Document Name: ERD/Table Design/Sitemap/UI	SWD/Form No. 1
Effective Date: 01/03/2019	Version: 1.0	Page no. 35

9.3 Logon

The wireframe illustrates the layout of a Logon page. It features a top navigation bar with a 'Logo' placeholder on the left, a central 'Navigation' area, and 'Login' and 'SignUp' buttons on the right. Below the navigation bar, there are three buttons: 'Booking', 'Search Flight', and 'Trace Booking'. The main content area contains a central container with three input fields: 'Member Account', 'Password', and a 'Login' button. A 'Footer' section is located at the bottom of the page.

Design Plan:	Document Name: ERD/Table Design/Sitemap/UI	SWD/Form No. 1
Effective Date: 01/03/2019	Version: 1.0	Page no. 38

9.6 Passenger Info

The wireframe illustrates the layout for the 'Passenger Info' page. It features a header section with a 'Logo' placeholder, a large 'Page Name' area, and 'Login' and 'SignUp' links. Below the header is a light green section containing four input fields: 'From AirLine', 'To Airline', 'Date Derpart', and 'No. Passenger'. The main content area is divided into two sections: 'Passenger Detail' and 'Contact info'. The 'Passenger Detail' section is a large, empty box. The 'Contact info' section is a smaller box with a circular refresh icon above it. The entire form is enclosed in a dark border with visible resize handles.
